

HIRAHARA et al. — 09/928,480
Attorney Docket: 007324-0282826

IN THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Previously presented) A food management and processing system comprising:
 - a main data server having a main food data base storing information about food to be managed together with a food identification code for every food, the information about food including information about management of the food and information about processing of the food, the main data server being adapted to be externally connected via a public communication network;
 - a user data server having a user food data base storing the information about the food to be managed for every user, the user data server being adapted to access to the main data server via the public communication network;
 - a food storage apparatus having a food managing function and adapted to access via a user communication network to the user data server, the food storage apparatus including food identification code input means for inputting the identification code affixed to the food, access means for accessing via the main data server to the main food data base so that the information about the food corresponding to the food identification code is downloaded, and data control means accessing via the user data server to the user food data base to receive the food information; and
 - a food processor having an automatic food processing function and adapted to access via the user communication network to the user data server, the food processor including food identification code input means for inputting the identification code affixed to the food, access means for accessing via the main data server to the main food data base so that the information about the food corresponding to the food identification code is downloaded, and data control means accessing via the user data server to the user food data base to receive the food information.
2. (Original) A food management and processing system according to claim 1, wherein the food storage apparatus has a function of the user data server.
3. (Previously presented) A food management and processing system according to claim 1, wherein the main data server includes a personal food management data base and receives

HIRAHARA et al. -- 09/928,480
Attorney Docket: 007324-0282826

from the user data server the information about the food corresponding to a content stored on the user food data base, thereby storing the received information about the food.

4. (Original) A food management and processing system according to claim 3, wherein the main data server accepts an access to the personal food management data base received via the public communication network from a portable terminal unit.

5. (Previously presented) A food management and processing system according to claim 3, wherein the user data server accepts an access to the user food data base received via the public communication network from a portable terminal unit.

6. (Original) A food management and processing system according to claim 3, further comprising a portable terminal unit adapted to be connected to the public communication network so as to access via the main data server to the personal food management data base.

7. (Previously presented) A food management and processing system according to claim 4, wherein the food storage apparatus uploads the information about the food stored on the user food data base to the portable terminal unit.

8. (Previously presented) A food management and processing system according to claim 1, wherein the food identification code input means of the food storage apparatus receives the food identification code delivered from a radio tag affixed to the food, and the data control means of the food storage apparatus accesses to the user food data base regarding the food identification code received by the food identification code input means, thereby adding or deleting the information about the food.

9. (Previously presented) A food management and processing system according to claim 1, wherein the food identification code input means of the food processor receives the food identification code delivered from a radio tag affixed to the food, and the data control means of the food processor accesses to the user food data base regarding the food identification code received by the food identification code input means to download the information about processing of the food in the information about the food, thereby executing the automatic food processing function on the basis of the information about processing of the food.

HIRAHARA et al. -- 09/928,480
Attorney Docket: 007324-0282826

10. (Previously presented) A food management and processing system according to claim 1, wherein the food identification code input means of the food processor receives the food identification code delivered from a radio tag affixed to the food, and the data control means of the food processor accesses to the main food data base regarding the food identification code received by the food identification code input means to download the information about processing of the food in the information about the food, thereby executing the automatic food processing function on the basis of the information about processing of the food.

11. (Previously presented) A food management and processing system according to claim 9, wherein when having executed the automatic food processing, the food processor delivers to the user data server a requirement of deleting the information about management of the food from the user food data base.

12. (Previously presented) A main data server comprising:
a main food data base storing information about food to be managed together with a food identification code for every food, the information about food including information about management of the food and information about processing of the food; and
data processing means accepting an access received via a public communication network from a user data server, the data processing means further accepting the information about the food corresponding to the food identification code stored on the main food data base when the information about the food is required to be downloaded, thereby providing the information about the food.

13. (Previously presented) A main data server according to claim 12, further comprising a personal food management data base managed for every user and receiving from the user data server the information about the food corresponding to a content stored on the main food data base and storing the same.

14. (Original) A main data server according to claim 12, provided with a function of accepting an access from a portable terminal unit to the personal food management data base, the access being received via the public communication network.

HIRAHARA et al. -- 09/928,480
Attorney Docket: 007324-0282826

15. (Previously presented) A food managing method executed by a main data server, comprising:

storing, on a main food data base, information about food to be managed together with a food identification code for every food, the information about the food including information about management of the food and information about processing of the food; and accepting an access from a user data server, further accepting a requirement for download of the information about the food corresponding to the food identification code stored on the main food data base, and providing the information about the food.

16. (Previously presented) A food managing method according to claim 15, further comprising storing, on a personal food management data base managed for every user, the information about the food corresponding to a content stored on the main food data base provided by the user data server.

17. (Original) A food managing method according to claim 15, further comprising accepting an access from a portable terminal unit to the personal food management data base, the access being received via a public communication network.

18. (Previously presented) A user data server comprising:
a user food data base storing information about food to be managed for every user;
access means for accessing via a public communication network to a main data server; and
data processing means adapted to be accessed via a user communication network from a food storage apparatus or a food processor to receive a requirement for readout of the information about the food stored on the user food data base, thereby accepting the requirement and providing the information about the food.

19. (Previously presented) A user data server according to claim 18, having a function of accepting an access from a portable terminal unit to the user food data base, the access being received via the user communication network.

20. (Previously presented) A food managing method executed by a user data server, comprising:

HIRAHARA et al. — 09/928,480
Attorney Docket: 007324-0282826

storing, on a user food data base managing food for every user, information about food to be managed;

accepting a requirement for an access to a main data server and accessing via a public communication network to the main data server; and

accepting an access from a food storage apparatus or a food processor via a user communication network to receive a requirement for readout of the information about the food stored on the user food data base, thereby providing the information about the food.

21. (Previously presented) A food managing method according to claim 20, further comprising accepting an access from a portable terminal unit to the user food data base, the access being received via the user communication network.

22.-30. (Canceled)

31. (Previously presented) A food processor comprising:
food identification code input means for inputting a food identification code affixed to food;
access means for accessing via a main data server to a main food data base and downloading information about food corresponding to the food identification code;
data control means for accessing via a user data server to a user food data base to receive the information about the food; and
food processing control means for inputting the food identification code affixed to the food to be processed, by means of the food identification code input means and executing an automatic food processing on the basis of the information about processing obtained by the access means and the data control means.

32. (Previously presented) A food processor according to claim 31, wherein the food identification code input means receives the food identification code delivered from the radio tag affixed to the food, and the data control means accesses to the user food data base to download the information about processing of the food and execute an automatic food processing on the basis of the information of processing of the food.

HIRAHARA et al. — 09/928,480
Attorney Docket: 007324-0282826

33. (Previously presented) A food processor according to claim 31, wherein the food identification code input means receives the food identification code delivered from a radio tag affixed to the food, and the data control means accesses to the main food data base to download the information about processing of the food and execute an automatic food processing operation on the basis of the information about processing of the food.

34. (Previously presented) A food processor according to claim 31, provided with a function of delivering, to the user data server, a requirement for deletion from the user food data base of the information about management of the food when the automatic food processing has been executed for the food.

35. (Previously presented) A method of processing food by means of a food processor, comprising:

- causing food identification code input means to input a food identification code affixed to food;

- causing access means to access via a main data server to a main food data base to download information about food corresponding to the food identification code;

- causing data control means to access via a user data server to a main food data base to receive the information about the food; and

- causing the food identification code input means to input the food identification code affixed to the food stored in a food storage apparatus and managing the stored food on the basis of the information about the food obtained by the access means and the data control means.

36. (Previously presented) A food processing method according to claim 35, further comprising:

- causing the food identification code input means to receive the food identification code delivered from a radio tag affixed to the food; and

- causing the data control means to access to the user food data base to download information about processing of the food corresponding to the food identification code received by the food identification code input means and executing an automatic food processing on the basis of the information about processing of the food.

HIRAHARA et al. — 09/928,480
Attorney Docket: 007324-0282826

37. (Previously presented) A food processing method according to claim 35, further comprising:

causing the food identification code input means to receive the food identification code delivered from a radio tag affixed to the food; and

causing the data control means to access to the main food database to download information about processing of the food corresponding to the food identification code received by the food identification code input means and executing an automatic food processing on the basis of the information about processing of the food.

38. (Previously presented) A food processing method according to claim 35, further comprising delivering, to the user data server, a requirement for deletion from the user food data base of the information about management of the food when the automatic food processing has been executed for the food.

39.-40. (Canceled)

41. (Previously presented) A food management and processing method comprising:

storing on a main food data base information about food to be managed together with a food identification code for every food, the information about food including information about management of the food and information about processing of the food;

storing on a user food data base the information about the food managed for every user;

inputting the identification code affixed to the food in a food storage apparatus with a food managing function to download the information about the food corresponding to the food identification code via a public communication network from the main food data base and to download the information about the food via a user communication network from the user food data base; and

inputting the identification code affixed to the food to a food processor with an automatic food processing function to download the food information corresponding to the food identification code via the public communication network and to download the information about the food via the user communication network from the user food data base.

HIRAHARA et al. — 09/928,480
Attorney Docket: 007324-0282826

42. (Previously presented) A food management and processing method according to claim 41, further comprising downloading the food information when a personal food management data base managed for every user and storing the information about the food corresponding to a content stored on the user food data base is accessed via the public communication network.

43. (Original) A food management and processing method according to claim 42, further comprising downloading the food information when the personal food management data base is accessed via the public communication network from a portable terminal unit.

44. (Previously presented) A food management and processing method according to claim 41, further comprising downloading the food information when the user food data base is accessed via the user communication network from a portable terminal unit.
